# PHY306 Introduction to Cosmology Numerical Answers to Problems

- 1. No numerical answer.
- 2. No numerical answer.
- 3. No numerical answer.
- 4. (a),  $z \simeq 0.025$ ; (b)(i), 100–200 Mpc; (ii), just about, but the effect will be small (z = 0.033 > 0.025: difference between  $d_L$  and  $d_A$  is significant compared to 5% systematic error, but difference of either from  $d_P$  is not).
- 5. No numerical answer.
- 6. No numerical answer.
- 7. (i),  $8.3 \times 10^{-10} \text{ J m}^{-3}$ ; (ii),  $9.2 \times 10^{-27} \text{ kg m}^{-3}$ ; (iii),  $1.4 \times 10^{11} M_{\odot} \text{ Mpc}^{-3}$ ; (iv), 5.2 GeV m<sup>-3</sup>.
- 8.  $R_0 = 20$  Gpc; r = 10.7 Gpc, for which  $x_k = 10.2$  Gpc.
- 9. No numerical answer.
- 10. No numerical answer.
- 11. (c), condition is  $a^3 > \Omega_{\rm m0}/2(1-\Omega_{\rm m0})$ , where the flatness condition requires that  $\Omega_{\Lambda 0} = 1 \Omega_{\rm m0}$ . This is either a minimum value of a (for fixed  $\Omega_{\rm m0}$ ) or a maximum value of  $\Omega_{\rm m0}$  (if you take a = 1).
- 12. (b),  $a = \Omega_{\rm r0} / \Omega_{\rm m0}$ ; (c),  $a = (\Omega_{\rm m0} / \Omega_{\Lambda 0})^{1/3}$ .

## Problems

- 13. (a), 6400; (b), 0.73.
- 14. No numerical answer.
- 15. No numerical answer.
- 16. No numerical answer.
- 17. No numerical answer.
- 18.  $49 \pm 8 \text{ km s}^{-1} \text{ Mpc}^{-1}$ .
- 19. No numerical answer.
- 20. No numerical answer.
- 21. (i), 11 Gyr (SCDM 8.8 Gyr); (ii), 9.0 Gyr (SCDM 7.7 Gyr).
- 22. (a), 12.0 Gpc; (b), 4.9 Gpc.
- 23. (a),  $59 \pm 10$  km s<sup>-1</sup> Mpc<sup>-1</sup>, which is larger than the SCDM value (note that the errors aren't relevant for this comparison, because they are not independent), but less than Riess et al. (admittedly, the difference  $(15\pm10)$  is not statistically significant).
  - (b),  $H_0 t_0 = 1.02 \pm 0.17$ ;  $\Omega_{\rm m0} = 0.19$ .
- 24. (e),  $r = \frac{c}{H_0 \sqrt{\Omega_{\rm m0} 1}} \left(\theta(t_0) \theta(t_z)\right)$  where  $t_z$  is the time corresponding to redshift z, and  $\theta(t_z)$  is the corresponding value of  $\theta$ .
- 25. (b),  $a^3 = \Omega_{m0}/2\Omega_{\Lambda 0}$ ; (d),  $\frac{27}{4}\Omega_{m0}^2\Omega_{\Lambda 0} = (\Omega_{m0} + \Omega_{\Lambda 0} 1)^3$ ; (e), useful form of expression is

$$\Omega_{\Lambda 0} = \frac{4}{27} \, \frac{(\Omega_{\rm m0} - 1)^3}{\Omega_{\rm m0}^2} \left( 1 + \frac{\Omega_{\Lambda 0}}{\Omega_{\rm m0} - 1} \right)^3,$$

which can be solved iteratively by using the factor outside the brackets to calculate a first value of  $\Omega_{\Lambda 0}$  and then substituting this into the factor inside the brackets. Repeat, each time substituting in the new value of  $\Omega_{\Lambda 0}$ , until the result doesn't change to whatever number of significant figures you're interested in. This is easy to do on a spreadsheet. It will converge if  $\Omega_{m0} > 1$  and  $\Omega_{\Lambda 0} \ll \Omega_{m0} - 1$  (so that the second term in the brackets is small).

- 26. (a),  $R_0 = c^2 / \sqrt{4\pi G \mathcal{E}_{m0}}$ .
- 27. No numerical answer.
- 28. (i), 13 Gyr; (ii) 11 Gyr.
- 29. Horizon distance, 13.7 Gpc (matter-only 8.1 Gpc, open universe 11.9 Gpc). Distance to object with z = 3, 6.1 Gpc (matter-only 4.1 Gpc, open universe 4.9 Gpc).

Result for horizon distance is rather sensitive to how finely binned your numerical integration is; result for z = 3 is much less so.

- 30. z = 0.73 (not dependent on  $H_0$ ); 6.2 Gyr.
- 31. 50 km s<sup>-1</sup> Mpc<sup>-1</sup>.

2	1.0	2.0	3.0	4.0	5.0
Look-back time (Gyr)					
Matter-only	12.1	11.8	11.4	10.5	8.4
Benchmark	11.9	11.5	10.9	9.8	7.4
Proper distance (Gpc)					
Matter-only	7.1	6.6	6.0	5.1	3.5
Benchmark	7.5	6.9	6.1	5.0	3.2

32. (b), if  $M' = M + \Delta M$ , then  $H'_0 = H_0 \times 10^{\Delta M/5}$ .

(c), if  $\ell' = \ell + \Delta \ell$  (linear error) then  $H_0$  is not changed, but the intercept on the Hubble plot isn't zero. If  $\ell' = \ell(1 + \Delta \ell)$  (fixed percentage error, more plausible), then  $H'_0 = H_0/(1 + \Delta \ell)$ .

33. No numerical answer.

## Problems

#### **PHY306**

- 34. (c)(i),  $71.5 \pm 1.3$  km s<sup>-1</sup> Mpc<sup>-1</sup> (statistical errors only) with outlier,  $70.9 \pm 1.3$  km s<sup>-1</sup> Mpc<sup>-1</sup> without.
- 35. No numerical answer.
- 36.  $1.4 \times 10^{-14}$  u m<sup>-3</sup> s<sup>-1</sup>.
- 37. No numerical answer.
- 38. (a),  $(-8 \pm 12) \times 10^{-7}$ ; (b),  $(-5.2 \pm 7.5) \times 10^{-54}$ ; (c), 61 e-foldings.
- 39. (a),  $\Omega_k(10^{-35} \text{ s}) = (-2.2 \pm 3.1) \times 10^{-38}$ , 43 e-foldings; (b),  $\Omega_k(10^{-35} \text{ s}) = (-6.2 \pm 8.9) \times 10^{-56}$ , 63 e-foldings.
- 40. (a)(i), 12.0 Gpc; (ii), 330 kpc; (iii),  $330 \times 10^{-6} \times 1100/12 = 0.03$  rad = 1.7°. (b)(i),  $9.0 \times 10^{-27}$  m =  $2.9 \times 10^{-43}$  pc; (ii),  $z = 1.2 \times 10^{35}$ ;  $1.0 \times 10^{-25}$  pc; 40 e-foldings.
- 41. No numerical answer.
- 42. No numerical answer.
- 43. No numerical answer.
- 44. No numerical answer.
- 45. No numerical answer.
- 46. No numerical answer.
- 47. (b),  $w \leq -\frac{1}{3}$ ; (c)(i) z = 0.73 (same as benchmark); (ii) n = 20/3 and  $t_0 = 20/(3H_0)$ ; (iii)  $r = \frac{20c}{17H_0} ((1+z)^{17/20} 1)$ .

## **PHY306**

- 48. No numerical answer.
- 49. No numerical answer.
- 50. No numerical answer.
- 51. No numerical answer.
- 52. (a), 1.25; (b)(i), 25.3; (ii), 17 kpc; (c)(i), 13 Gyr; (ii), 12 Gpc; (iii), 0.4 Gpc.
- 53. (i), 12 Gyr; (ii), 7.8 Gyr; (iii), 26; (iv), 2.6".
- 54. (i), 0.0152; (ii), 0.0066; (iii), 0.0034; (iv), 0.0023; (v), 0.0018.
- 55. (a),  $\pm 20\%$  (more precisely,  $^{+20}_{-17}\%$ ); (b), ~100.
- 56. (a), 13.8 Gyr; (b),  $8.60 \times 10^{-5}$ ;  $\mathcal{E}_{\rm BB} = 4.17 \times 10^{-14} \,\mathrm{J m^{-3}} \implies \Omega_{\rm BB} = 5.09 \times 10^{-5}$ ; (c), z = 0.720,  $t_{\rm lb} = 6.5 \,\mathrm{Gyr}$ ; (d),  $H = 1.54 \times 10^{6} \,\mathrm{km \ s^{-1}} \,\mathrm{Mpc^{-1}}$ ,  $\Omega_{\rm r} = 0.249$ ,  $\Omega_{\rm cdm} = 0.628$ ,  $\Omega_{\rm b} = 0.122$ ,  $\Omega_{\Lambda} = 1.48 \times 10^{-9}$ . [Note: they don't quite add to 1 because of rounding errors.]
